

EGO1P5 | Six optional mechanism ablations

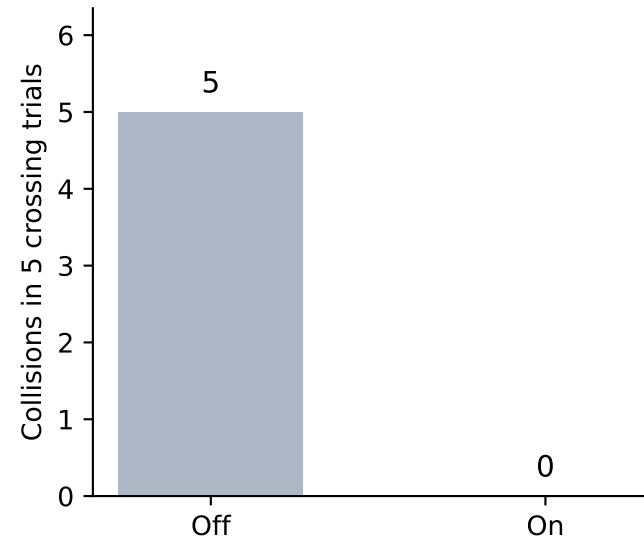

Production core; controlled synthetic scenes and numerical tests. These are not six flight-success claims.

1. Depth uncertainty

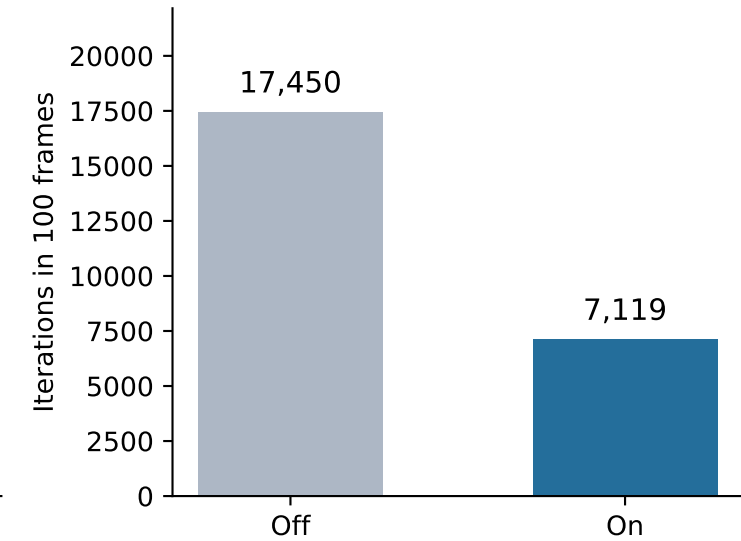

Lower is better

2. Dynamic prediction

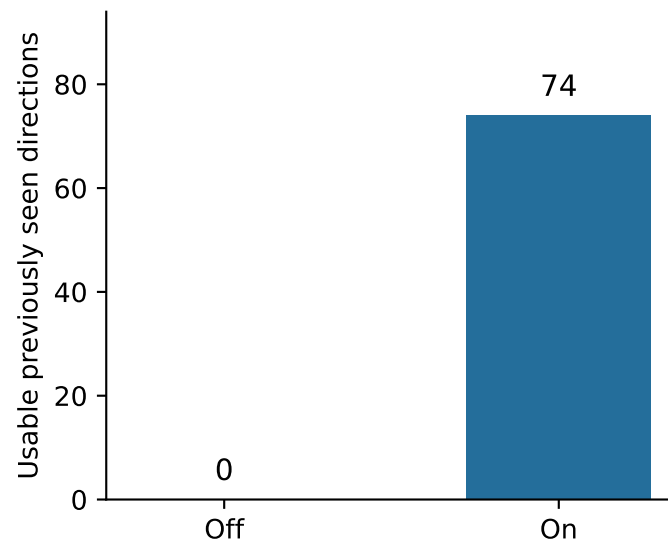

Lower is better

3. Incremental harmonic field

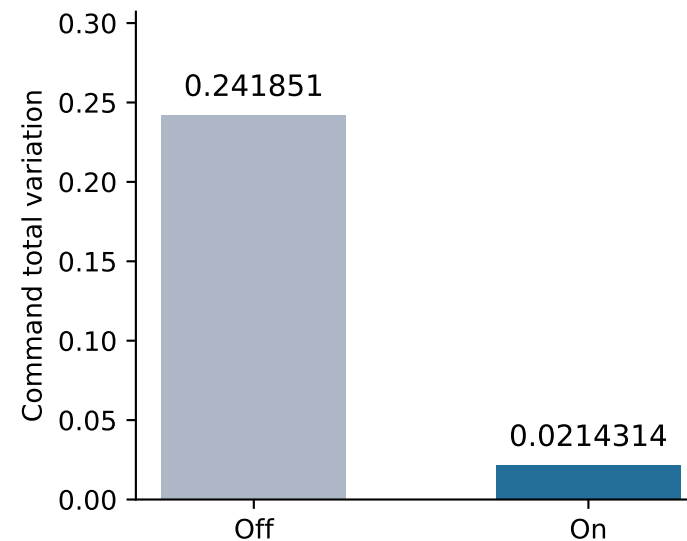

Lower is better

4. Spherical memory

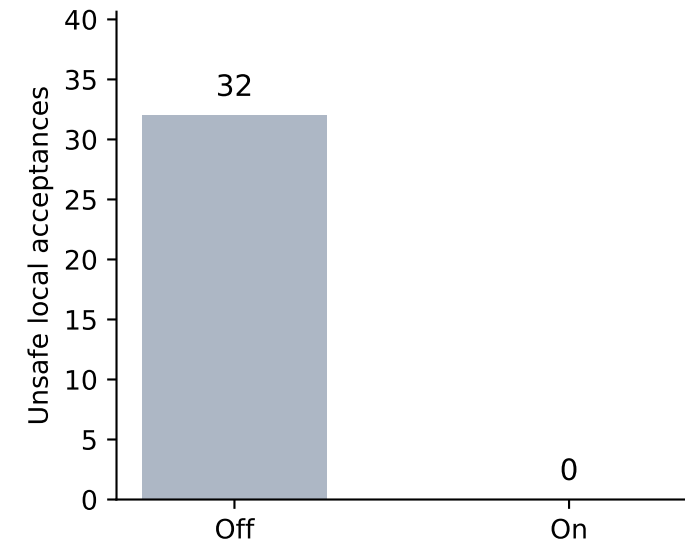

Higher is better; expired = 0

5. Operator intent (revised)

Lower jitter; no added release delay

6. Shared occupied evidence

Lower is better; local unknown refused
